

Project Executable Files

Date	2 July 2026
Team ID	xxxxxx
Project Name	AI-Powered Lead Generation System
Maximum Marks	3 Marks

Project Executable Files

The **AI-Powered Lead Generation System** includes all the required source code, Machine Learning model files, Streamlit application files, datasets, lead prediction and scoring modules, and dependency files needed to execute the project successfully. The project is organized into separate folders for better readability, maintenance, and future enhancements. A setup guide and dependency file are provided to help evaluators run the application in a local environment.

Step 1: Submission Checklist

S.No	Item to Submit	(Yes / Submitted No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	Yes

6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable)	NA
8	Dockerfile / Containerization config (if applicable)	No
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Deployed
Login Credentials (Demo)	Not Applicable
Platform / Hosting Provider	Local Streamlit Server (or Local Salesforce Developer Edition, if applicable)
Repository Link	https://github.com/hemamalinibora4-sketch/AI-Powered-Lead-Generation-System
Demo Video Link	https://drive.google.com/file/d/11aagO72iLW-BEXbIH0uI2_ORmxyz0bS-/view

Step 4: Run Instructions

Steps to run the application:

1. Install Python and the required libraries using `pip install -r requirements.txt`.
2. Open the project folder in Visual Studio Code.
3. Activate the virtual environment (if available).
4. Run `streamlit run app.py` in the terminal.
5. Open the generated localhost URL (usually <http://localhost:8501>)

1. 6. Enter customer or lead information and click Analyze Lead (or Generate Lead Score) to view the predicted lead score, lead quality, and AI-generated recommendations.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Application currently runs on a local server	Can be deployed to Streamlit Cloud, Render , or another cloud platform in the future.
2	No user authentication or CRM integration.	Can be implemented in future versions for enhanced security and business integration.
3	Lead prediction accuracy depends on the quality and size of the training dataset.	Accuracy can be improved by using larger, more diverse datasets and advanced Machine Learning models.
