

Scalability & Future Plan

Date	3 July 2026
Team ID	XXXXXX
Project Name	AI-Powered Lead Generation System
Maximum Marks	1 Mark

Scalability & Future Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Supports a limited number of users in a local environment.	Deploy the application on cloud platforms such as AWS, Azure, or Streamlit Cloud to support multiple concurrent users and improve accessibility.
2	Data Storage	Uses local files or basic datasets for storing customer and lead information.	Integrate a relational database such as MySQL, PostgreSQL, or Salesforce Database to efficiently manage customer records, lead history, and analytics data.
3	Performance	Uses a locally trained Machine Learning model for lead prediction and scoring.	Optimize ML models using model tuning, caching, and cloud-based deployment to improve prediction speed and handle large-scale lead processing.

Scalability Overview

The AI-Powered Lead Generation System is designed to automate lead collection, lead scoring, and customer qualification using Artificial Intelligence and Machine Learning techniques. The current system successfully identifies potential leads, generates lead scores, and provides recommendations through an interactive web application. However, there are opportunities to improve scalability, performance, security, and user experience. Future enhancements will focus on supporting a larger number of users, improving prediction accuracy, integrating advanced AI technologies, connecting with CRM

platforms, and deploying the application on cloud infrastructure for real-world business usage.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address
1	Uses a limited customer/lead dataset for model training.	May reduce prediction accuracy for diverse business scenarios and customer behaviors.	High
2	Runs mainly in a local development environment.	Limits access for multiple users and remote business teams.	High
3	Basic user interface without advanced authentication and role management.	Suitable mainly for project demonstration and testing purposes.	Medium
4	Limited integration with external CRM platforms.	Requires manual data transfer between systems.	Medium

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Integrate user authentication, database support, customer history tracking, and advanced lead management features.	Next 3 Months	Provides secure access, better data management, and personalized sales insights.
Phase 3	Add advanced AI models, CRM integration, automated email communication, and improved lead prediction capabilities.	Next 6 Months	Improves lead qualification accuracy, customer engagement, and sales automation.
Phase 4	Deploy the application on cloud platforms with real-time analytics dashboards and mobile-friendly interfaces	Next 12 Months	Supports large-scale users, real-time monitoring, and enterprise-level deployment.
