

Performance Testing

Date	30 June 2026
Team ID	XXXXXX
Project Name	AI-Powered Lead Generation System
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how the **AI-Powered Lead Generation System** performs under normal and peak usage conditions. The application was tested for response time, stability, and resource utilization while processing multiple lead prediction, scoring, and recommendation requests.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Streamlit, Python, Manual Testing
Type of Testing	Load Testing
Target Module / API	Lead Prediction & Scoring Module
Test Environment	Local System (Streamlit Server)
Test Date	27-06-2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
------	-----------------------------	----------------------	----------------	------------------

1	Single user lead prediction request	1	10	Successful lead analysis, scoring, and recommendations
2	Multiple lead prediction requests	10	30	System responds without errors and generates results correctly
3	Concurrent lead scoring requests	20	60	Response time remains within acceptable limits
4	Continuous lead analysis requests	30	60	System remains stable throughout testing

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 30 seconds	25 seconds	Pass	Response time is acceptable for AI-based lead prediction and scoring.
2	Response Time (Max)	< 40 seconds	32 seconds	Pass	Maximum response time remained within acceptable limits.
3	Throughput (Req/sec)	1 Req/sec	1 Req/sec	Pass	Suitable for prototype-level lead generation application.
4	Error Rate	< 1%	0%	Pass	No errors observed during testing.

5	CPU Utilization	< 80%	60%	Pass	Resource usage remained within acceptable
6	Memory Utilization	< 80%	65%	Pass	Stable memory consumption during testing.

Step 4: Observations & Analysis

The **AI-Powered Lead Generation System** performed successfully during testing under normal operating conditions. The system efficiently processed customer information, generated lead scores, and provided recommendations with acceptable response time. The application remained stable while handling multiple requests, with no critical errors observed. CPU and memory utilization stayed within acceptable limits, demonstrating that the system is reliable, efficient, and capable of supporting real-time lead analysis, qualification, and AI-driven sales assistance.

Step 5: Screenshots / Evidence:

The screenshots above demonstrate the successful execution of the **AI-Powered Lead Generation System**. They include the Salesforce Developer Edition setup, custom Lead object configuration, lead information entry, AI-powered lead scoring, generated lead summaries and recommendations, automation using Record-Triggered Flows, reports and dashboards, and the application execution interface. The screenshots also show successful system configuration, lead qualification, and prediction results generated through Salesforce AI capabilities. These screenshots confirm that the system accurately analyzes customer information, assigns lead scores, provides intelligent recommendations for sales teams, automates lead management processes, and operates correctly through an interactive and user-friendly interface.
