

Technology Stack

Date	27 June 2026
Team ID	XXXXXX
Project Name	AI-Powered Lead Generation System
Maximum Marks	2 Marks

Technology Stack:

The **AI-Powered Lead Generation System** uses a combination of frontend, backend, Artificial Intelligence, Machine Learning, data processing, and development tools to identify, analyze, and score potential leads. The selected technology stack ensures scalability, maintainability, efficient lead data processing, accurate predictions, and an interactive user experience for effective lead management and business growth.

Technology Stack Details – AI-Powered Lead Generation System

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	Streamlit, HTML, CSS	Provides an interactive and user-friendly web interface for entering lead details, viewing lead scores, predictions, and recommendations.

2	Backend / Server-Side	Python	Handles data processing, AI model execution, lead scoring, prediction generation, and application logic.
---	------------------------------	--------	--

3	Database / Data Storage	CSV Dataset / Database	Stores customer information, lead records, historical interactions, and data used for model training and analysis.
4	Cloud / Hosting / Deployment	Local Host / Streamlit Cloud	Used to run the application locally and supports future cloud-based deployment for wider accessibility.
5	Version Control & CI/CD	Git, GitHub	Enables source code management, version tracking, collaboration, and project maintenance.
6	AI / Machine Learning & Other Tools	Scikit-learn, Pandas, NumPy, Python ML Libraries, Generative AI APIs	Used for data preprocessing, lead prediction, lead scoring, analytics, and AI-based recommendations for improving lead generation efficiency.
